

July 4th 1908 - Georgia  
In the afternoon I took a walk up the river to see what was to be done about getting the water out of the mine. The water is now at a level of 10 feet above the bottom of the mine. It is necessary to have a pump to remove it. The pump will be put in the mine and the water will be pumped out through a pipe. The pipe will be connected to a motor which will move the pump. The pump will be able to remove all the water from the mine in about 10 hours. The cost of the pump will be approximately \$1000. The cost of the pipe will be approximately \$500. The total cost will be approximately \$1500.
